

The future of beauty

TECHNOLOGY INCREASINGLY OFFERS EVER-MORE INNOVATIVE WAYS TO ADDRESS CLIENTS' CONCERNS...

Heaven Skincare have introduced the Lipolis 7, a natural alternative to liposuction that gives fast and effective results. It is a pain free and non-invasive treatment that passes electric currents into the body to stimulate nerves and muscles, as well as targeting fat cells and reducing cellulite. It can be used for different treatments, such as the Bee Slim massage and the Anti-ageing facial as it is best for contouring and slimming, and it also helps create intensive movements to reduce lymphatic fat.

The Skinbreeze skin rejuvenation system from CACI International provides a number of advanced treatment technologies: Crystal Free Orbital Dermabrasion, LED Photo Rejuvenation, O2 Oxygen Infusion, and O3 Ozone Therapy but with the addition of Neon Plasma Skin Tightening functionality, it's a very versatile skin treatment system!

The Skinbreeze Neon Plasma handpiece is ideal for the advanced salon professional; the sought-after technology can be incorporated into

any salon facial to treat skin ageing concerns such as fine lines, wrinkles,

skin tightening and the instantly improved results to skin texture, tone, and appearance. Visible results can be seen after just one treatment and a course of 10 to 15 treatments is recommended.

Although Finishing Touches Group is known as global

scars, and sun damage. The 20 minute Skinbreeze Neon Plasma salon treatment is pain-free and has become very popular with men and women who are concerned with ageing.

Clients love the immediate

leaders in the world of micropigmentation and semi permanent make-up, they are also recognised as trailblazers in the area of micro-needling, with their new Meso Skin Needling procedure.

Meso Skin Needling is an effective and painless procedure, which is conducted using any of their semi-permanent make-up devices. There are two different types of Meso Skin Needling procedures; the Meso Me uses a plastic needle and Meso + uses a metal needle.

With just a simple change of the needle cartridge, the tilting needle plate instantly transforms any of the machines.

Meso Me is a 'gentle' skin needling concept using only plastic needles. This treatment is suitable for all skin types, with all redness dissipating within 1-2 hours of

the procedure. This is particularly good for clients who want minimal trauma and downtime. Using hyaluronic skin infusions from Cell Biologique and an 18-point plastic needle cartridge, the client will be able to see an almost instant improvement in skin texture and tone as well as less fine lines and wrinkles.

Radio Frequency (RF) is one of the most popular and effective treatments available for skin tightening and rejuvenating skin, and has been used within the field of medicine for over 50 years.

Dr Samantha Hills, Clinical Director at Lynton, explains.

“The term ‘Radio Frequency’ refers to electric vibrations within the radio waves portion of the electromagnetic spectrum and is used as an aesthetic technique, which selectively delivers heat energy deep into the dermis, stimulating fibroblast cells to produce new collagen and elastin (collagenesis), resulting in a lifting and tightening effect to the skin,” she told us.

“Through stimulating natural renewal of collagen, RF treatment can deliver natural looking facial skin tightening results with little to no downtime, and can be used on all skin types across all treatable areas, not just the face. Radio Frequency technology remains a popular procedure used by clinics and salons globally, and has increased dramatically in recent years due to a demand for non-invasive facial procedures.

“Here at Lynton, we have developed a platform that uses this proven RF technology at 2MHz in combination with two other independent facial skin rejuvenation technologies: 585 IPL and Fractional laser at 2940nm. By combining these three non-invasive facial skin rejuvenation technologies in one

platform and treatment parameter, 3JUVE addresses not only skin laxity and loss of firmness but also the two other key signs of ageing; discolouration and the appearance of fine lines and wrinkles.”

We asked Dr Askari Townshend, Founder & Medical Director at ASKINOLOGY what techniques he was currently using for facial skin rejuvenation.

“At ASKINOLOGY, I have access to many different treatments and most fall into three groups; treating lines and wrinkles, colours, and laxity,” he said. “I rarely use just one modality – tackling the problem in different ways often gives better results. I’ve been using the new 3JUVE facial skin rejuvenation platform from Lynton Lasers more and more - it is

convenient with three modalities on one platform to treat each of the groups already mentioned. This also allows me and my staff to combine treatments without having to leave the room or fire up other systems.”

The Dermalux® LED Phototherapy treatment is a non-invasive treatment that harnesses the power of light for visibly radiant, rejuvenated and refined skin. After just one treatment, Dermalux® instantly energises skin cells to revitalise a dull and tired complexion. A course of treatments offers long lasting results, stimulating the skin’s natural rejuvenation and repair processes to promote healthy looking skin, accelerate cell renewal and resolve a range of skin concerns.

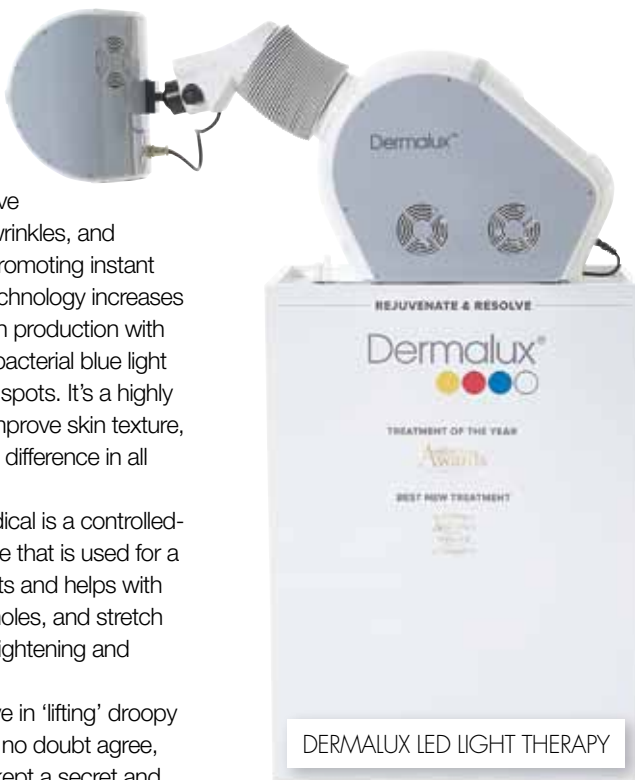

Renowned facialist Sarah Chapman explained the

rejuvenating properties of Dermalux® LED phototherapy.

“A course of Dermalux LED Light Therapy is a non-invasive way to fight fine lines, wrinkles, and blemishes, as well as promoting instant radiance. This clever technology increases cell energy and collagen production with infrared light, while antibacterial blue light helps if you’re prone to spots. It’s a highly effective treatment to improve skin texture, which will make a huge difference in all those close-ups.”

The Jett Plasma Medical is a controlled-powered medical device that is used for a variety of skin treatments and helps with the removal of scars, moles, and stretch marks, as well as skin tightening and lifting.

It is especially effective in ‘lifting’ droopy upper eyelids. As you’ll no doubt agree, droopy lids cannot be kept a secret and hence they can broadcast one’s age. The skin around the eyes is very thin and will lose elasticity faster than the rest of the face.

Jett Plasma Lift is the next generation technology for skin tightening and stimulating collagen production. It enables the skin to produce a significant amount of collagen creating a lifting and tightening of the area treated, especially in those areas where previously we were not able to offer effective non-surgical treatment.

Skin tightening and texture improvements are the biggest benefits but the amazing thing with Jett Medical UK’s Plasma Pen is the safe and effective treatment of skin lesions, moles, fibromas, and pigmentations and much, much more.

It seems that technology is advancing every month, and we’ll be here bringing you the latest updates.
